# Known Security Issues IAM System of VOTING Wahlvorschlag

The IAM system used in the Bug Bounty program for the product "VOTING Wahlvorschlag" includes specific PRE-production configurations, which may differ in some aspects from those in production. These elements are also included in the list below:

| ID                  | Title   | Summary   |
|---------------------|---|---|
| SEC-1490            | Activated FeatureFlag AlwaysAllowedRedirectUris | The PRE environment contains a global redirect URI whitelist, which contains specific domains, independent of application-specific configurations   |
| SEC-1159<br>SEC-823 | Token lifetime                                  | A token lifetime of 24 hours is configured on the PRE environment.  |
| SEC-919<br>SEC-823  | RememberMe and cookie lifetime                  | A RememberMe and cookie lifetime of 1 week is configured on the PRE environment.  |
| Misc.               | Feature configurations                          | For test reasons, the following FeatureFlags are deactivated on the PRE environment: <ul style="list-style-type: none"><li>• PreventAccountDowngrade (2FA)</li><li>• SecurityNotificationsEnabled</li><li>• EnableImmutableFields</li><li>• EnforceAnyRoleOnAuthorization</li></ul> |
