VOTING Wahlvorschlag
Table Name	Business Name (DE)	Description
Election Data		
DomainOfInfluence	Wahlkreis	List of domains of influence as defined in the master data by the superior authority.
DomainOfInfluenceElections	Wahlkreis Wahlen	Reference to a predefined *<DomainOfInfluence>* object associated with a specific election.
Elections	Wahlen	Representing a majority or proportional election where candidates are either elected based on the most votes or seats are allocated to party lists.
InfoTexts	Infotexte	Informational text for input fields that offer additional context and guidance to users.
BallotDocuments	Wahldokumente	The election can be supplemented with documents that provide additional information for the parties.
List Data		
Lists	Listen	A list containing candidate proposals for proportional or majority elections. These lists are primarily created and managed by parties, while the superior authority reviews them and provides feedback.
ListComments	Listen Kommentare	Comments serve as a communication channel between representatives of the superior authority and the parties.
Candidates	Kandidaten	The candidate(s) for majority or proportional elections.
MarkedElements	Markierte Elemente	Individual candidate attributes can be marked by the superior authority to indicate information requiring verification or corrections. Marked elements are typically used in conjunction with list comments.
ListUnions	Listenverbindungen	List unions represent both a union- and sub-union list connection: • Union list connection is an association of the lists of two or more election proposals.

Table Name	Business Name (DE)	Description
		• Sub-union connections are connections within a union list connection.
Configuration		
Settings	Einstellungen	Tenant specific settings as defined in the master data by the superior authority.
Templates	Vorlagen	Collection of metadata for layouts, data exports and e-mails, linked to the file-based cshtml-templates.
Database Migration		
__EFMigrationsHistory	Migrationstabelle	Entity framework migration history table that tracks executed schema and/or data migrations.
